

### Product Overview

The CMD263P3 is a broadband MMIC low noise amplifier housed in a leadless 3x3 mm plastic surface mount QFN package. The CMD263P3 is ideally suited for microwave radios and C and X-band applications where small size and low power consumption are needed. The broadband device delivers greater than 22 dB of gain with a corresponding output 1 dB compression point of +11 dBm and a noise figure of 1.4 dB. The CMD263P3 is a 50 ohm matched design eliminating the need for external DC blocks and RF port matching.

**Applications Information**

**Application Circuit**

**Biasing and Operation**

The CMD263P3 is biased with a single positive drain supply. Performance is optimized when the drain voltage is set to +3.6 V, though it may be set to a minimum of +2.0 V and a maximum of +4.5 V.

RF power can be applied at any time.

**GaAs MMIC devices are susceptible to damage from Electrostatic Discharge. Proper precautions should be observed during handling, assembly and test.**

## Applications Information

### Evaluation Board

The circuit board shown has been developed for optimized assembly at Qorvo. A sufficient number of via holes should be used to connect the top and bottom ground planes. As surface mount processes vary, careful process development is recommended.
