## 5.9 – 7.1 GHz Power Amplifier

### Product Overview

The Qorvo TGA2753-SM is a C-Band Power Amplifier with integrated power detector. The TGA2753-SM operates from 5.9 – 7.1 GHz and is designed using Qorvo’s power GaAs pHEMT and GaN HEMT production processes.

The TGA2753-SM typically provides 40 dBm of saturated output power with small signal gain of 31 dB. Third Order Intercept is 47 dBm at 30 dBm SCL.

The TG2753-SM is available in a low-cost, surface mount 42 lead 7x9 QFN package and is ideally suited for Point-to-Point Radio.

PCB Mounting Pattern

Notes:

1. The pad pattern shown has been developed and tested for optimized assembly at Qorvo. The PCB land pattern has been developed to accommodate lead and package tolerances. Since surface mount processes vary from company to company, careful process development is recommended.
2. Ground vias are critical for the proper performance of this device. Vias should have a final plated thru diameter of .1524 mm (.006").
3. For best thermal performance, vias under the ground paddle should be copper filled.
