CMD253

6-14 GHz High IP3 Fundamental Mixer

Product Overview

The CMD253 is a high IP3 double balanced mixer die that can be used for up- and downconverting applications between 6 and 14 GHz. The CMD253 has very high isolation to both the RF and IF ports due to the optimized balun structures, and can operate with an LO drive level as low as +15 dBm. The CMD253 can easily be configured as an image reject mixer or single sideband modulator with external hybrids and power splitters.

Key Features

- Low Conversion Loss
- High IP3
- High Isolation
- Wide IF Bandwidth
- Small Die Size: 1160 um x 790 um

Functional Description

Pin	Function	Description	Schematic
1	LO	This pin is DC coupled and matched to 50 ohms	2	RF	This pin is DC coupled and matched to 50 ohms	3	IF	This pin is DC coupled. For applications not requiring operation to DC, this port should be DC blocked using a series capacitor whose value has been chosen to pass the necessary IF frequency range. For operation to DC, this pin must not source or sink more than 16 mA of current or part non-function or part failure may result.	Backside	Ground	Connect to RF / DC ground	

Applications Information

Assembly Guidelines

The backside of the CMD253 is RF ground. Die attach should be accomplished with electrically and thermally conductive epoxy only. Eutectic attach is not recommended. Standard assembly procedures should be followed for high frequency devices. The top surface of the semiconductor should be made planar to the adjacent RF transmission lines.

RF connections should be made as short as possible to reduce the inductive effect of the bond wire. Use of a 0.8 mil thermosonic wedge bonding is highly recommended as the loop height will be minimized.

The semiconductor is 100 um thick and should be handled by the sides of the die or with a custom collet. Do not make contact directly with the die surface as this will damage the monolithic circuitry. Handle with care.

GaAs MMIC devices are susceptible to damage from Electrostatic Discharge. Proper precautions should be observed during handling, assembly and test.
